

The future's green

ENVIRONMENTAL POLICY

Buschjost GmbH

■ Environmental protection for sustainability reasons

At **Buschjost** responsibility for the protection of the environment is taken into consideration in all decisions. Environmental protection is a business objective, and therefore it is an obvious obligation for the company towards our customers, our fellow men and successive generations. We comply with laws, standards and statutory regulations, and in addition to that we commit ourselves to continuously improving company environmental protection. All measures in this context orient themselves by the best available and economically viable technology!

■ Protection of resources

We save the environment by reasonably minimizing the exploitation of resources. In production and in the provision of products and services it is our aim to keep the pollution of the environment as low as possible. In the procurement of our raw materials, auxiliary materials and supplies we proceed with scrupulous adherence to ecological criteria, and we give the preference to suppliers with whom environmental protection rates high. Suppliers who keep violating environmental protection- and occupational safety laws will be excluded!

■ The company and the employees take responsibility

Environmental protection concerns us all.

Therefore we keep our employees informed of everything around environmental protection initiatives and objectives. As a result the thinking process about the environmental impact emanating from our company is triggered. With this we want to achieve that our employees submit suggestions for the improvement of our environmental sustainability.

■ Provision for environmental protection

Making actively provision for the environment means that we constantly scrutinize, analyze and improve company processes in a comprehensive manner. For this we promote qualification, creativity and commitment of our employees.

■ Dialogue with the public

We offer our business partners, our neighbours, the authorities, and the interested public to have an open and objective dialogue with us about possible environmental influences of our company. Stimuli and hints regarding the improvement of our environmental protection are welcome at any time.
